

Aviva Fleet Telematics

A data-driven pathway to safety
and savings.

Fleet telematics allows you to empower your business with real-time insights to help reduce risks, control costs, and improve fleet performance. By enabling **Aviva Fleet Telematics** to interact with your existing telematics provider, your business may benefit even more.

As a business with a medium to large commercial fleet, telematics offers a solution to help manage risk and operating costs. Aviva Fleet Telematics goes beyond historical claims and risk exposure, combining telematics data and fleet management insights to offer a fresh approach to commercial fleet insurance.

Aviva Fleet Telematics offers an opportunity to obtain fleet coverage tailored to your risk management and budget requirements, and may provide rewards for safe driving habits.

How does Aviva Fleet Telematics insurance work?

Aviva Fleet Telematics is simple to use. Aviva partners with Draivn, an independent data aggregator, to integrate seamlessly with your current telematics provider to collect data. Draivn's secure API helps safeguard the collected data so that it:

- › remains **confidential and accurate** through consent management, data security, and encryption technologies
- › is **clear and transparent** for you on what data is shared through consent management
- › is of **high quality** through multi-stage processing.

How you can benefit

In addition to premium discount opportunities, Aviva Fleet Telematics provides your business with access to an online dashboard to:

- › help you understand the performance of your drivers, and
- › help you learn ways to improve your overall operations.

By helping enable a more proactive approach to accident and claim prevention, and by identifying potential high-risk exposure through data-driven insights, Aviva Fleet Telematics can help your business benefit from better safety and risk reduction measures.

Aviva Fleet Telematics generally uses fleet data at an aggregate level to look at the entire fleet performance and trends. Telematics data used includes trip activity, driving behaviour, location, speeding, harsh breaking, and cornering.

A discount is automatically provided for customers that sign up for Aviva Fleet Telematics and meet the eligibility requirements. Further savings may be available to customers with favourable performance.
